## General Chemistry <br> Mr. MacGillivray <br> Atomic Structure Worksheet

1. The number of protons in the nucleus of an atom of a particular element is called the $\qquad$
$\qquad$ of that element.
2. In a neutral element, the number of protons must equal the number of
$\qquad$ .
3. The mass number of an atom is the sum of the $\qquad$ and the
$\qquad$ in the nucleus of an atom.
4. Atoms of an element that have the same number of protons but different numbers of neutrons are said to be different $\qquad$ of that element.

5. The number " 26 " is the $\qquad$ of Fe .
6. The symbol "Fe" stands for the name of this element: $\qquad$ .
7. The number " 55.847 " is the $\qquad$
$\qquad$ of the element Fe.
8. There are three isotopes of hydrogen: $\mathrm{H}-1, \mathrm{H}-2$, and $\mathrm{H}-3$. The average mass of a hydrogen atom is 1.0079 (check this on the periodic table). Which of these three isotopes above is probably the most common? Why?
9. Examine the abundance of Fe isotopes:
5.8\% Fe-54
91.8\% Fe-56
2.1\% of Fe-57
$0.28 \%$ of $\mathrm{Fe}-58$
Look at the atomic mass of Fe again. Why do you think it is so close to 56 amu?
II. Fill in the table below. All atoms are neutral.

| Isotope <br> symbol | 54 <br> 26 Fe | 56 <br> 26 <br> Fe | 57 <br> 26 <br> Fe | 58 <br> 26 Fe |
| :---: | :---: | :---: | :---: | :---: |
| Alternate <br> symbol | Fe-54 | Fe-56 |  |  |
| \# of <br> protons | 26 | 30 |  | 58 |
| \# of <br> neutrons |  |  |  |  |
| Mass \# |  |  |  |  |

III. Fill in the table below. All atoms are neutral.

| Element <br> name | Symbol | $\mathrm{p}^{+}$ | $\mathrm{n}^{0}$ | $\mathrm{e}^{-}$ | mass <br> number | Z |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 15 | 16 |  |  |  |
|  | 238 <br> 92 |  |  |  |  |  |
|  |  | 7 | 8 |  |  |  |
|  | 12 <br> 1 |  |  |  |  |  |
|  | 2 <br> 1 |  |  |  |  |  |
|  | 3 <br> 1 |  |  |  |  |  |
